Canadian Natural Resources Limited GENERAL PRESSURE VESSEL INFORMATION													
District: Grande	Prairie, AB	Skid No.											
Facility: Pass C	Location (LSD): 05-05-61-19 W5M												
Vessel Name Equipment Number: Line Heater													
Orientation: Horizontal													
Status: Not	in Service		Regulatory Inspection										
PRESSURE VESSEL NAMEPLATE DATA													
"A" or "G	" or "S" (Sask.) or BC R	egistration Number.	CRN Number:										
	H-9622.12												
Vessel serial num	Size: 55 in x 20 ft												
Shell thickness:	Shell material: SA 36												
Head thickness:	Head material: SA 36												
Tube wall thickne	Tube material:												
Tube diameter:				Tube length:									
Channel thicknes		Channel material:											
Design pressure		Shell: 9308 kPa			Operating pressure		Shell:						
		Tubes:				Tubes:							
Shell: 93°C Design Temp.				Operating temp	erature	Shell:							
2 congri rempi	Tubes:	Tubes:				Tubes:							
X-ray: RT-1		Heat treatment: HT											
Code parameters:	ASME B 31.3			Coated: No									
Manufacturer: Pla	Year built: 1996												
Corrosion allowa	Manway: No

Other (Describe):													
Inspection IntervalPSV Service Interval													
(Determined by MIC in conjunction with Chief Inspector following guidelines of CNRL's Owner-User Inspection Program)													
Reports reviewed and accepted by:    Mechanical Integrity Coordinator													

Fill out all forms as completely as possible. <u>All information</u> is important! Use back of sheets to record additional information or sketch if required. Copy of report to be filed by MIC at site, and copy sent to Chief Inspector

External Inspection Items	G	F	Р	N/A	Comments
	U	Г	Г	1N/A	
Insulation Verify sealed around manways,					Line heater is 70% insulated – no open or torn sections.
nozzles, no damage present, and there is no	Х				
egress of moisture.					
External Condition Assess paint condition,	Х				Painted sections inside building - good condition - no exposed
areas peeling, record any corrosion, damage,					metal.
etc (record location, size and depth of					
corrosion or damage)					
Leakage Record any leakage at flanges,	Х				No leaks detected.
threaded joints, weep holes on repads, etc.					
Saddle/skirt Assess condition of paint, fire	Х				Saddle: No distortion, buckles or dents.
protection, concrete. Look for corrosion,					No obvious leaks at saddle to shell area – no stains.
buckling, dents, etc. Look at vessel surface					Paint is in good condition – no exposed metal.
area near supports. Verify no signs of leakage					British British British
at attachment to vessel and attachment welds					Skid package is grounded.
are acceptable. Ground wire attached?					
Anchor Bolts Hammer tap to ensure secure.	Х				Firmly bolted to skid deck.
Look for cracking in treads or signs of					
deformation.					
<b>Concrete foundation</b> Check for cracks,				Х	No concrete – vessel sits inside skid and skid is mounted on
spalling, etc.					pilings.
Ladder / Platform Describe general				Х	No ladder or platforms.
condition, ensure support is secure to vessel,				21	
describe any hazards.					
<b>Nozzle</b> Assess paint, look for leakage, and	Х				No deflection – no leaks.
ensure stud threads are fully engaged. Record					All studs fully engaged to threads – no short bolts.
any damage, deflection, etc. Are nozzles					Nozzles are not gusseted.
gusseted?					rozzies die not gassered.
Gauges Ensure gauges are visible, working,	Х				Pressure gauge: No pressure gauge.
no leakage, and suitable for range of MAWP/					Temp gauge: No gauge.
Temp.					Sight glass on accumulator is unobstructed.
External Piping Ensure pipe is well	X				Well supported, no deflection, all clamps and shoes in place.
supported. All clamps, supports, shoes, etc. in	Λ				Paint is in good condition – no exposed metal – no corrosion.
place. Look for evidence of structural					Faint is in good condition – no exposed metai – no corrosion.
overload, deflection, etc. Paint condition,					
external corrosion?					
Valving Ensure no leaks are visible. Valves	X				Well supported – no leaks.
are properly supported and chained if	Λ				wen supported – no leaks.
necessary.					
<b>PSV</b> Ensure PSV is set at pressure at or below	X		<u> </u>		Located on inlet piping – set above MAWP of 1 <sup>st</sup> and 2 <sup>nd</sup> Pass
that of vessel.	Λ				coils.
עומו טו אבאבו.					Seal intact
					No block valve
NDE methods Was UT/ MPI done on vessel	+				Discharge piping same size as outlet orifice.
(MI coordinator to review results)	Х				Ultrasonic thickness survey carried out on piping – no metal thickness detected below nominal minus corrosion allowance.
(ivit coordinator to review results)					unexitess detected below noninial innus corrosion allowance.

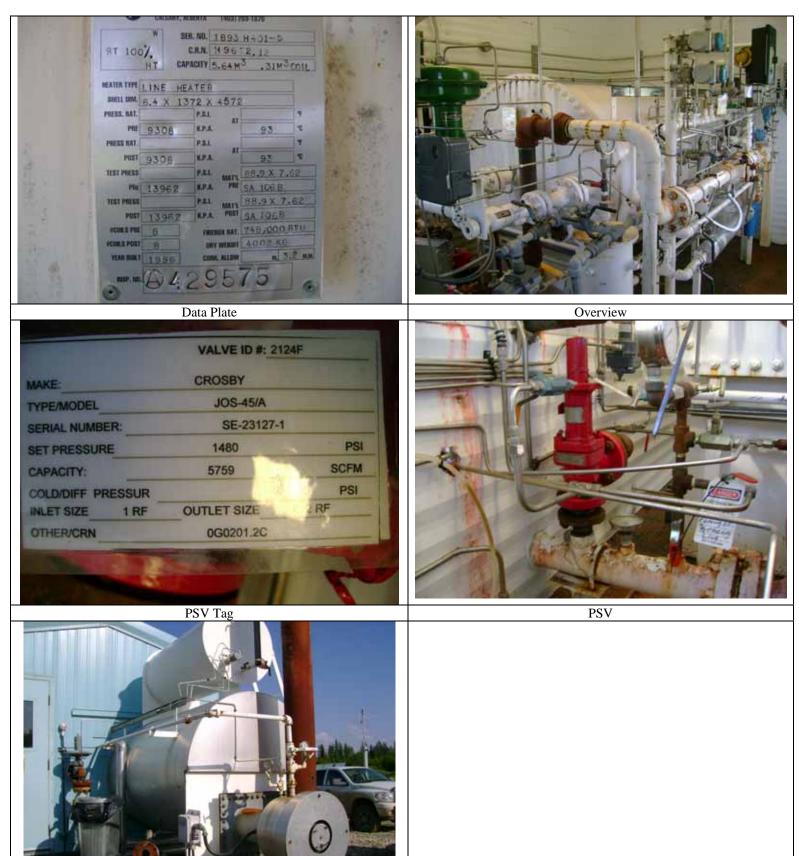

**Recommendations or corrective actions : Vessel is Fit for Service or describe corrective actions required)** (MIC to review corrective actions with Operations, discuss with Chief Inspector where necessary, and get remedial action implemented)

**Recommendations:** 1. Reset PSV to MAWP of coils (1350 PSI) or below to ensure proper protection.

**Summary:** This line heater is in good overall condition, visual external and ultrasonic thickness survey carried out on piping – no metal thickness detected below nominal minus corrosion allowance.

Line heater is not fit for service with current PSV set pressure.
