Ladder / Platform	☐	Accept	Mechanical damage on West top platform support	☐	☐	☐
Leaks	☐	No	No evidence of leaks	☐	☐	☐
Piping from Vessel	☐	Accept	Riser saddle and lug supports for associated piping			
Previous UT Survey	☐	Yes	Locations marked, no history provided	UT Company: N/A		

External Visual Observations

At the time of inspection the dehydrator was not in service and the vessel is tagged out of service

The coating is flaking and chipped throughout exposing the base metal to minor surface corrosion with no evidence of pitting.

There are two 24" manways on the vessel. The East side manway, hardware and davit arm are in acceptable condition
The top head davit arm and pin have been removed

The two 0-300 C temperature gauges are not within design temp range and the 0-500 C gauge needle is at the 500 C mark

All platforms and ladders are secure with well supported cages on the ladder
There is moss growth on the top 8" inlet elbow cladding interface that may result in MIC
The outlet piping has a small section of cladding/insulation removed, the insulation is exposed, discolored and deteriorating which may result in CUI to the piping system
The top platform support beam is bent on the West side
There is mechanical damage noted thru out the surfaces on the shells
There is also mechanical damage on the top head below the paint

A UT corrosion survey was performed at the time of inspection with no significant wall losses recorded.

Recommendations:

Remove/ replace insulation on piping
Remove moss and treat area
Consider replacing temp gauges if temp is expected to exceed 300 C
Clean and touch up the coating to aid in the protection against corrosion

If this vessel is to be moved and/or placed into service the lifting lugs and top nozzle should be MT examined as well as ABSA document AB-10 completed

Insp. Company: Matrix_Inspection LSD: 01-24-096-05W6 Jurisdiction #: A0146844

Maxi-Trak Observations Summary (Summarize inspection results Max 255 Characters):

Coating deteriorated exposing base metal to surface corrosion
Damaged insulation on piping
2 temperature gauges not within range
Moss growth on top 8" elbow at the cladding interface

Maxi-Trak Recommendations Summary (Summarize Recommendations Max 255 Characters):

Remove/ replace insulation on piping
Remove moss and treat area
Consider replacing temp gauges if temp is expected to exceed 300 C
Clean and touch up the coating to aid in the protection against corrosion

Actions Corrected at Time of Inspection: (If actions were corrected at the time of Inspection – note the corrected actions here.)

No actions were corrected at the time of inspection

Additional Visual Observations

No additional visual observations

Any other safety concerns or observations from associated equipment: (for example associated piping, buildings, pumps etc…)

No safety concerns noted at the time of inspection

Insp. Company: Matrix_Inspection LSD: 01-24-096-05W6 Jurisdiction #: A0146844

Thickness and Remaining Life Evaluation *" Must be Completed"*

MUST BE COMPLETED AND RESOLVED WITH CNRL IMMEDIATELY UPON DISCOVERY OF LOW WALL THICKNESS AREAS

Step 1: Was any thickness measurement location found to be less than (Nominal WT – Corrosion Allowance)?: ***No***

If YES, proceed to Step 2; if NO, proceed to "Crack Evaluation" and "CNRL Criticality Designation".

Step 2: Which component(s) were found below (Nominal WT – Corrosion Allowance)?

Components found below Nom - CA:

Components
Top - Head
- Shell
Bottom - Head
Bottom - Drain Nozzle
N/A - N/A

Perform Steps 3 – 8 for each component with actual thickness less than (Nominal WT – Corrosion Allowance).

Step 3: Describe Location and Extent of Corrosion*:*

Components	Location and Extent of Corrosion
N/A - N/A	Not Applicable for this Inspection
N/A - N/A	Not Applicable for this Inspection
N/A - N/A	Not Applicable for this Inspection
N/A - N/A	Not Applicable for this Inspection
N/A - N/A	Not Applicable for this Inspection

Notes:
Circumferential stress used for nozzles

Step 4:

- For shells and nozzles, calculate minimum required thickness (T-min) as per ASME Section VIII UG-27.
- For heads, calculate minimum required thickness (T-min) as per ASME Section VIII UG-32.

Components	T-Min
Top - Head	2.374
- Shell	1.162
Bottom - Head	2.374
Bottom - Drain Nozzle	0.302
N/A - N/A	N/A

Thickness and Remaining Life Evaluation *(Continued)*

Step 5: Is any measured thickness less than calculated minimum required thickness (T-min)? ***N/A***

If YES, complete Step 6
If NO, proceed to Step 7..

Step 6: Is nature and extent of pitting acceptable as per API 510? ***N/A***

Step 7: Calculate Remaining Life as per API 510. How? (Find last reading; use nominal thickness if nothing available). Short Term Corrosion Rates and Long Term Corrosion Rates.

Components	Remaining Life (Yrs)
Top - Head	99
- Shell	99
Bottom - Head	99
Bottom - Drain Nozzle	99
N/A - N/A	N/A

Step 8: Contact CNRL Integrity Coordinator to discuss above results.

- Name of CNRL contact: Not Applicable for this Inspection
- Date and time of conversation: Not Applicable for this Inspection

Summary/results of conversation:
Not Applicable for this Inspection

Crack Evaluation by Magnetic Particle or Alternative Inspection *" Must be Completed"*

MUST BE COMPLETED AND RESOLVED WITH CNRL IMMEDIATELY UPON DISCOVERY OF CRACK-LIKE INDICATIONS

Were any indications found to suggest the vessel contained cracks? ***N/A***

If NO, proceed to "CNRL Criticality Designation".

If YES, Contact CNRL Integrity Coordinator to discuss results.

- Name of CNRL contact: Not Applicable for this Inspection
- Date and time of conversation: Not Applicable for this Inspection

Summary/results of conversation:
Not Applicable for this Inspection

Canadian Natural	PRESSURE VESSEL VISUAL INSPECTION REPORT	Report #: 156960-MD-07 Inspect Date: 10/16/2012 Page: 8 of 14 Insp. Co. Job #: 156960

Insp. Company: Matrix_Inspection LSD: 01-24-096-05W6 Jurisdiction #: A0146844

CNRL Criticality Evaluation – *"MUST BE COMPLETED"*

The CNRL In-Service Pressure Vessel Inspector MUST answer all the following questions

1. Is the vessel fit-for-service? : ***Yes***
2. Was the measured thickness less than the calculated minimum required thickness (T-min) for any component?: ***No***
3. Were MT indications found?: ***N/A***
4. Was the remaining life less than 6 years for sour service vessels or less than 10 years for sweet service vessels?: ***No***
5. Were NCR's or Action Items generated as a result of the inspection? : ***Yes***
6. Were UT readings below (Nominal WT – Corrosion Allowance) found? : ***No***

Information on CNRL Owner User Program - Criticality Designation and Required Review

RED – Vessel Inspection Results are deemed RED if one of the following occurred:

- The measured thickness was less than the calculated minimum required thickness (T-min) for any component.
- MT indications were found.
- The remaining life was calculated to be less than 6 years for sour-service vessels or less than 10 years for sweet-service vessels.

RED inspection reports must be signed off by the CNRL Chief Inspector.

YELLOW – Vessel Inspection Results are deemed YELLOW if one or more of the following occurred:

- The vessel was declared NOT fit-for-service by the 3rd Party In-Service PV Inspector.
- NCR's or Action Items were generated as a result of the inspection.
- UT readings below (Nominal WT – Corrosion Allowance) were found.

YELLOW inspection reports must be signed off by the CNRL Pressure Equipment Integrity Coordinator.

GREEN – Vessel Inspection Results are deemed GREEN if all of the following are true:

- The vessel was declared fit-for-service by the 3rd Party In-Service PV Inspector.
- UT readings below (Nominal WT – Corrosion Allowance) were NOT found.
- MT indications were NOT found.
- NCR's or Action Items were NOT generated as a result of the VE inspection.

GREEN inspection reports must be signed off by the 3rd Party In-Service Pressure Vessel Inspector.
